

FOR BUSINESS CONTINUITY
MANAGEMENT & PLANNING

A plan to go from
business interruption to
business as usual

A crisis that interrupts business operations can debilitate an organization and, in turn, drive away customers. In our Digital Age, an interruption is often due to a security breach or an unplanned IT or telecom outage. At times, it's something else like a natural disaster.

You can't predict the interruption, but you can be prepared when it happens. Business continuity management and planning (BCMP) helps organizations plan and prepare for business interruptions to minimize their impact. BCMP also encompasses recovery plans for restoring operations during an interruption.

Address the unpredictable nature of business interruptions with a solution that focuses on proactive planning and preparing to minimize the impact of interruptions.

Lockpath's Approach to BCMP

Program management

Develop detailed business continuity plans. Identify risk indicators that can lead to business interruptions.

Reporting and analytics

Generate reports and analytics specific to BCMP like tabletop test results and executive-level snapshots.

Business impact analysis

Conduct business impact analyses to gauge the financial impact of disruptions.

Dependency modeling

Conduct dependency modeling to determine and account for the likely chain reaction.

Crisis/incident management

Use BC planning to outline recovery of assets and resources in the event of a business interruption.

Recovery planning/testing

Develop recovery plans with asset priority and order of resources restored. Use tabletop exercises to test and refine plans.

Accessible anywhere

Store plans for business continuity, disaster recovery, and crisis management in one convenient, cloud-based location. Even in a disaster, plans are accessible from anywhere.

Managing business continuity with the Lockpath Platform

The Lockpath Platform from NAVEX Global equips you to organize and maintain your company's business continuity management and planning (BCMP) programs.

Create clear, detailed business continuity and recovery plans in Lockpath, from conducting risk assessments and tabletop exercises to linking findings to assets and organizational data. By offering a holistic approach to BCMP, Lockpath addresses interruptions that can come from any number of organizational areas, as well as third parties.

During the planning process, you can account for assets and resources, as well as use RPO and RTO analysis for recovery planning. Use Lockpath to conduct business impact analysis

to estimate the influence from potential interruptions. Thanks to data integration, you can continuously monitor key risk indicators and import new findings from third-party risk assessments for governance and program management.

Unlike business continuity (BC) and recovery plans that are created and collect dust, plans created in Lockpath are easily updated and tested in order to continually refine plans. Lockpath's tabletop exercises enable you to test plans and perform gap analyses. Testing that involves departments offers an added benefit; it contributes to a culture of preparedness.

At any time, plan details or test results can be shared with management by using Lockpath's reporting features. Produce interactive reports with

drill-down detail that reveal the depth and thoroughness of the BC plan and ongoing efforts to support business continuity. For example, if senior management or the board wants to know what plans are in place in the event of a major IT incident, you can quickly produce a high-level report with supporting detail.

Bring clarity and confidence to BCM planning

Business continuity management is serious business. It takes planning, coordination, testing, analysis, documentation, management involvement, and more. These activities can be expertly managed with the Lockpath Platform.
