

# NAVEX ESG Environmental Sustainability Management

*Define, measure, and meet your sustainability goals*

Companies across the globe are recognizing the value of lessening their environmental impact from their business operations. Government agencies, top talent, customers, and investors are demanding organizations act responsibly and actively promote sustainability in their operations and their supply chain's operations. Managing environmental sustainability is now a mainstream activity of all resilient organizations.

More and more companies are seeking long-term competitive advantages or doing their part to Leave No One Behind by aligning their strategies with various ESG standards and stakeholder expectations. Defining, measuring, and achieving sustainability goals are increasingly complex activities both. This is especially true when it relates to clean water, sanitation, and responsible consumption and production. Stakeholders across the spectrum want confidence that reporting is accurate, timely, and actions have the right visibility.

## NAVEX ESG's Environmental Sustainability Management

NAVEX ESG's Environmental Sustainability Management collects, calculates and reports your environmental footprint across all your locations around the world. The solution helps you manage the task aligned with your ESG and can accommodate reporting frameworks such as SASB, GRI, CDP and TCFD.

### Gain Visibility to Actions:

- » Issue and manage assignments related to collecting and tracking energy, water, waste, audit inquiries and Scope 1, Scope 2 and Scope 3 greenhouse gasses (GHG).
- » Automatically convert local units to standardized metrics for accurate impact analysis.
- » Leverage dashboards and reports to communicate sustainability initiatives.

### Centralize Efforts:

- » Provide users a consistent and intuitive interface to submit and collect sustainability metrics.
- » Store and share key documents in a secure document library.

Feature	Benefit
Collect qualitative and quantitative sustainability data	Centrally manage assignments related to collecting resource usage and other metrics. Gain visibility into ESM status how ESG processes are managed.
Convert energy, water, waste, and other datapoints to normalized metrics	Leverage integration with global emission factors to calculate GHG emissions, provide actionable metrics and gain auditable insights.
Dashboards and reports	Leverage dashboards and reports to view your impact and achievement of environmental and social goals. Measure performance against targets to track progress against corporate goals. Understand where to act.
Secure Document Library	Store important policies, documents and reports for audits, customer and investor responses and other needs.
Scope 1, 2, and 3 analysis	Better understand your company's climate impact from your internal business operations and from across your supply chain.
Support for ESG frameworks	Report on sustainability metrics required for Sustainability Accounting Standards Board (SASB), Global Reporting Initiative (GRI) and the Carbon Disclosure Project (CDP), and more.
